

Core Product 1.5 Release Notes

The Company development team is pleased to announce the availability of Core Product 1.5. This document provides information on release dates, new features, defects fixed in this release, and related documentation.

Release Dates

[Provide release dates for pre-production and production environments, if applicable.]

Environment	Region	Release Date
Alpha	US East	mm dd, yyyy
Beta	US East	mm dd, yyyy
General Availability (GA)	US East	mm dd, yyyy

What’s new in Core Product 1.5?

[Feature descriptions state the update and its benefit.]

This release includes the following new product features:

First Feature Title

First Feature Title enables Core Product 1.5 to comply with government security requirements. This ensures Company passes legal audits and avoids fines and penalties.

Second Feature Title

Second Feature Title enables users to edit jobs while they are running. This reduces time spent waiting for a job to complete before users can make edits.

Defects Fixed

[Defect descriptions state the bug and the fix.]

This release fixes or addresses the following defects:

First Defect

A defect on the Job Creation page prevented users from selecting a Product to add to the job run. Users can now see all options in the Product dropdown field.

Second Defect

Job runs were timing out after one minute, which was not long enough to complete a job run. Core Product 1.5 extends the time-out clock to ten minutes.
